

NANTUCKET COTTAGE HOSPITAL

October is Breast Cancer Awareness Month

Did you know?

One in eight women in the U.S. will be diagnosed with breast cancer in her lifetime

Breast cancer is the leading cause of cancer deaths among women in the U.S. aged 40-59

When caught early before it spreads beyond the breast, the five-year survival rate for breast cancer is 98%

Studies suggest that many women are not following recommended guidelines for early mammography screenings and follow-ups, which often results in more advanced tumor size or cancer stage at diagnosis.
